

Paving the Way for Mobility Innovation

The future of mobility is coming. But are we ready?

Technology is placing us tantalisingly close to a mobility landscape that's autonomous, connected, electric and shared – where micromobility solutions widen access, new solutions for delivering goods are emerging, data insights improve the customer experience and the environmental and health impacts of travel are minimised.

But what are the cultural, technological, funding, infrastructure and legislative barriers we need to overcome to bring this future closer to reality in the UK and how do we manage the interface with the wider energy system?

With urbanisation and climate change compelling us to act, how can we quicken the pace of change and encourage innovation – while protecting people's interests?

From debates around data privacy to enabling infrastructure and how we balance the mixed needs of transport users, join us on 12 June to explore how the UK can be a global mobility leader.

We'll also be getting a glimpse into tomorrow's mobility solutions during a start-up pitch session that you won't want to miss, followed by a tour of one of the capital's best-kept secrets: the Queen Elizabeth Olympic Park, where London 2012 has created a legacy which continues at pace, creating new mixed use communities whilst enabling innovation in mobility and other urban challenges.

Time: 4-6pm

Date: Tuesday 12 June 2019

Venue: Plexal, Here East, Queen Elizabeth Olympic Park, London E20 3BS

Agenda:

4pm: Welcome, panel debate and Q&A

4.45pm: Mobility innovation pitch

Hear from some of the companies on the bleeding edge that have solutions to our biggest mobility challenges.

5.45pm: Networking

6pm: Guided 30-minute tours of Plexal, Here East and Queen Elizabeth Olympic Park.

Learn about how the Park's energy, transport and services infrastructure was designed to enable both a successful 2012 Olympic Games and an inclusive legacy for East London. See how the park and its sporting venues have evolved since 2012 and witness first hand some of the new developments now taking shape.

Challenge (to be uploaded onto ENGIE portal)

Introduction

On 12th June, ENGIE and Plexal are bringing together thought leaders and experts from across the clean transport sector, to discuss the key challenges and potential solutions to the rapid deployment of new mobility solutions in the UK. As part of this event, we will be inviting up to 5 start-ups or SMEs to present their companies and solutions to a panel of thought leaders.

Context

We want to hear from start-ups and SMEs that are developing technology and services solutions that facilitate the transition to a clean, connected and autonomous mobility future. We are interested in hearing about;

- (a) solutions that involve leading edge technology or entirely new modes of transport,
- (b) new business models that provide greater inclusivity and access to clean transport,
- (c) solutions for last mile deliveries including the potential for integration of passenger/freight solutions,
- (d) solutions that can facilitate the more rapid deployment of EV infrastructure.

In summary, if you're using or developing technology, data or a new business model to solve a mobility challenge in a new or innovative way, we want to hear about your solutions.

This is your chance to get in front of the leading lights from the transport sector. *And as an added sweetener, **the overall winner will get a free Plexal membership for 12 months** –giving them access to a community of innovators from sectors like mobility, cybersecurity, AI and many more.*

In addition, **the winner will have the opportunity to discuss their solution in detail with ENGIE and explore ways that they could collaborate**, potentially leading to the development of a prototype, trial or wider partnership.
